Installation Instructions

The program is stored as runnable jars, with the names "vpn-OSX.jar" and "vpn-Windows.jar", in the root directory of this Github repository. Below are the installation instructions.

For OSX (*preferred*)

1. Download "vpn-OSX.jar" from Github repository
2. Open terminal
3. Navigate to the directory containing the downloaded runnable jar "vpn-OSX.jar"
4. Enter "java –jar –XstartOnFirstThread vpn-OSX.jar" to run

For Windows

1. Download "vpn-Windows.jar" from Github repository
2. Locate the downloaded runnable jar "vpn-Windows.jar" and simply click on it

Note: If by any chance the above instructions are unsuccessful. The program can be executed by importing the project into Eclipse and run as Java Application from there.

Sorry for any inconveniences.
